

CSPP2 Remedial Exam - 2

Survey System

This Exam is to build a survey system using object oriented programming concepts.

In Order to collect opinion from different people,few questions are posed.

The main aim of this system is to collect all the information(i.e the choice) from the participants and display most selected choice among the participants.

Following is the sample input:

1

Who should be the next Prime Minister?

RahulGandhi

NarendraModi

ManmohanSingh

None

3

Rehana

1 RahulGandhi

Rajesh

1 NarendraModi

Radhika

1 NarendraModi

The first line of this given example is number of questions in the survey. So, here there is only one question. Following lines consists of the question text and the options. By default, each question will have 4 options.

The next line contains number of participants. Here number of participants are three. So, each of the participants name followed by the question number with their response is given in the consecutive lines. qqqq-

Following is the Sample output:

Highest number of votes for question : Who should be the next Prime Minister? : NarendraModi

So, the output contains highest number of votes for every question.

Note: Main method will be given to your task is to complete other classes and methods to pass all test cases. as starter code, you need to write Question, Quiz and Participant classes.
